HOLOGRAM DISPLAYS

Large Scale Hologram Projection Gauze

Spectacular 3D hologram projections are created easier than ever using the ultra-lightweight and innovative projection gauze. Highly transparent and extra-wide metallic scrim for large scale 3D hologram effects. Looks so real that 3D objects appear to float in mid-air or surround a performer on stage. Projection gauze is extremely lightweight and foldable and therefore very easy to transport. It's the perfect holographic projection screen material and can be set up in no time.

INDOOR SIGNAGE

Hard skeletons have solid benefits

As new animals appeared in the Cambrian seas, many new types of hard parts evolved, such as shells, plates, and more complex structures. These hard parts are all types of skeletons.

As both predators and prey grew more complex, hard skeletons provided an essential defense against the animals' enemies. For prey, skeletons also provided their predators with a "warning" by making them difficult to swallow.

For both, hard skeletons provided support and a "hard backbone" for muscle attachment and movement. And skeletons made it possible for animals to move in new ways, such as crawling, swimming, and flying.

Trilobite 3rthropods
With all their legs, heads, and antennae, trilobites were the first animals to have a hard exoskeleton. They were the first to have legs and antennae, and a hard exoskeleton.

Transparent LCD Displays

Catalogue

Video

Transparent LCD Display Cases offer exciting new ways to engage your audience. The HD LCD technology combined with a transparent screen substrate opens up creative avenues that have never been an option with traditional LCD screens. Presenting solid black pixels on a transparent background can offer intriguing ways to deliver visual information to your audience, being used to reveal or conceal whatever is behind the screen.

The uses for this technology are limited only by your imagination. Retail windows, interactive booths, display cases, interactive games, vending machines, drinks coolers, this list goes on..

Sizes: ✓STUDIO offers transparent box display in dimensions of from 21.5" to 86", giving you great convenience to instantly showcase your star products at diverse occasions like museums, exhibitions, and boutique window decorations with the captivating motion graphics played on the outside screen. **Customized** sizes for special applications can be supplied on request

Transparent LED Screens

Transparent LED Screen is a type of LED display screen that is clear like a glass (60%-85% transparency) and has functions of an LED. It enables the viewers to see whatever is shown on the glass along with providing a complete coverage of its background as well. Since it enables audience to see what is happening behind the screen, it is also referred to as a see-through screen.

Object Recognition Touchscreen

The recognition of objects on large-scale touch screens utilizes the well-known principle of the cashier barcode scanning system and takes it to a new level: objects which are equipped with a special marker chip or printed code can be detected and processed from Multitouch displays in real-time.

The capacitive touch screen is activated by human touch, or in this case, conductive TAGS of **Object Recognition** which serve as an electrical conductor to stimulate the electrostatic field of the touch screen.

The object is recognized when the tags interfere with the electric field projected above the surface. This change in capacitance is detected by the controller which interprets the X and Y coordinates of the event.

Interactive Floor

INTERACTIVE Floors & Walls

Interactive floor & wall projection is a multimedia visual display system that projects incredible **interactive floor** or **wall** special effects, **floor** games or **floor** advertisements directly onto an **interactive floor** displays. Users control dynamic multimedia **interactive** displays with simple gestures and body movement. It's an engaging full-body interactive experience that immerses users in your message and endears them to your brand.

We offer a wide range of children interactive games including complete project design and installation anywhere in the world.

PROJECTION

Catalogue Video

Rear & Front Projection Films

Rear or front projection film is a paper-thin projection surface with integrated application adhesive for installation on glass and acrylic surfaces. All Screen Solutions rear or front projection films are designed to be projected onto with any projector type other technology that may be used as a projection source. One of many **advantages of rear projection** is that you can stand in front of the **screen** without blocking the light from the **projector** and casting a shadow on the **screen**. This gives more options for stage and room layouts and provides a more professional presentation setup. Rear projection film has a better performance in high ambient light environments than front projection screen

Our 360 rear projection film (viewed from both sides) using one side projector (Rear) is used here on glass room walls to create an amazing show viewed from all angles & sides

Our rear projection film contributes in making our virtual presenter that can act like your customers service agent, speaking and delivering messages 24/7 with no mistakes or greeting your visitors up on arrival

Catalogue Video

Purely Projection Real sky in real time

Using ultra short projection technology we are able to fit the screen into a very low ceiling void with only 450mm between the screen and the slab above.

The projection is extremely lifelike, we can also add a 4K camera mounted on the roof of the building to show the sky outside in real time as well as 4K media player content, we can go too far and add IP cameras in other areas of Saudi Arabia and show the sky from other locations on the skylight.

The benefits of projection is that pricing is cheaper than led and the image quality is very good. Also the mounting is simpler. With LED laser light sources you can now install projection without worrying about lamps or filters needing to be changed.

3D Projection mapping

By projecting beautiful imagery over complex architecture and surfaces we create immersive content for advertising, sponsorship, national day celebrations, and other special events, as well as in permanent tourism attractions. We work with reliable projectors leasing companies in different countries to provide our customers with a full package service.
